

LESSON
7-6 **Practice C**
Quadrilaterals

Give all the possible names for each figure. Circle the most exact name.

Draw each quadrilateral as it is described. If it is not possible, explain.

5. a parallelogram that is also a trapezoid

6. a rhombus that is not a parallelogram

7. Draw an example of a quadrilateral that is not a parallelogram or a trapezoid.

8. All the sides of a quadrilateral measure 25 cm. Explain why this is not enough information to classify what kind of quadrilateral it is.
